

JOIVRE CHARLES

Full Stack Engineer
UI/UX Designer
Developer

PROFILE

Full-Stack Developer who possesses exceptional communication and collective cooperation abilities which have developed from the client service industry. The integration of scientific and innovative experiences with my analytical and development capabilities has allowed success in collaboration on projects in teams of 3-5 developers. The excitement of sharing these problem-solving capabilities and constant yearning for knowledge are to some extent my key drivers.

PROJECTS

Map3ater (<https://github.com/JimGigantes/Map3ater>) | (<https://jimgigantes.github.io/Map3ater/>)

- A catalog of nations with their most popular cuisines. Allows you to discover a new dish from an international nation with a mealDB API. Each recipe added to your favorites is saved in your passport.
- Built With: HTML5 | CSS3 | JavaScript | Materialize |

Electro-City (<https://infinite-atoll-29760.herokuapp.com/>)

- A site which allows users to post vintage items they no longer want and sell to which ever client feels the asking price for the item is equitable. Clients will be verified so there won't be risk of speaking to bots.
- Built With: HTML5 | CSS3 | JavaScript | Materialize | MERN | Recaptcha

Google Library (<https://sleepy-castle-98672.herokuapp.com/>)

- This application utilizes the google books api to search for and display books the clients maybe interested in. These books are stored and can be referenced later if the client wants to review their collection at a later period.
- Built With: HTML5 | CSS3 | JavaScript | Materialize | MERN |
